

RETAINIQ: CUSTOMER INTELLIGENCE & REVENUE OPTIMIZATION ENGINE

Identifying high-value customers to maximize business impact

Abhishek Kumar Gond

Data Science & Analytics (ML)

THE PROBLEM

- Not all customers contribute equally to revenue.
- Marketing budgets are limited.
- Targeting the wrong customers leads to wasted spend.

How do we identify the right customers to maximize revenue efficiently?

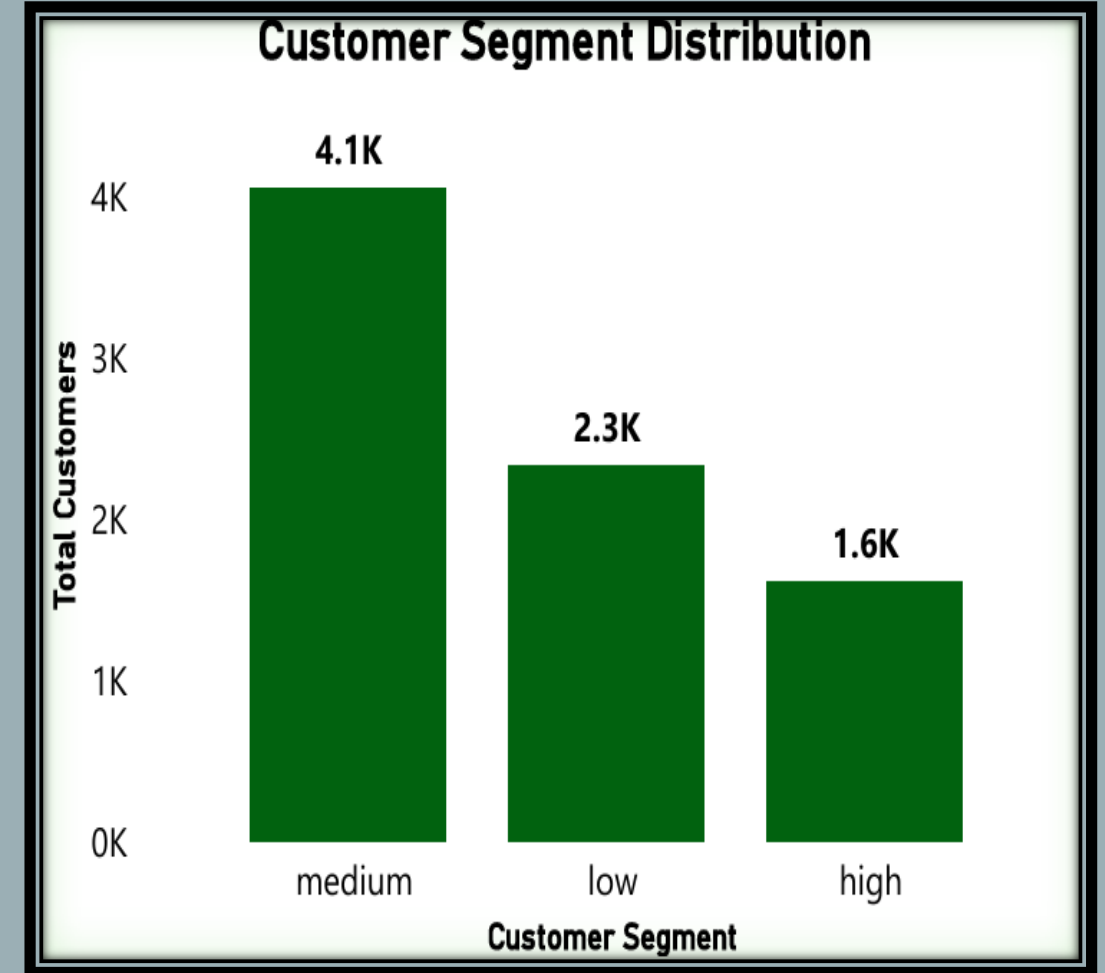

THE APPROACH

- **Understand Customer Behavior**
 - Analyze engagement
 - Purchase patterns
 - Activity levels
- **Predict Future Actions**
 - Estimate each customer's likelihood to:
 - Churn
 - Purchase
- **Make Targeting Decisions**
 - Rank customers based on expected value
 - Select top customers within budget constraints

Data → Predictions → Decisions

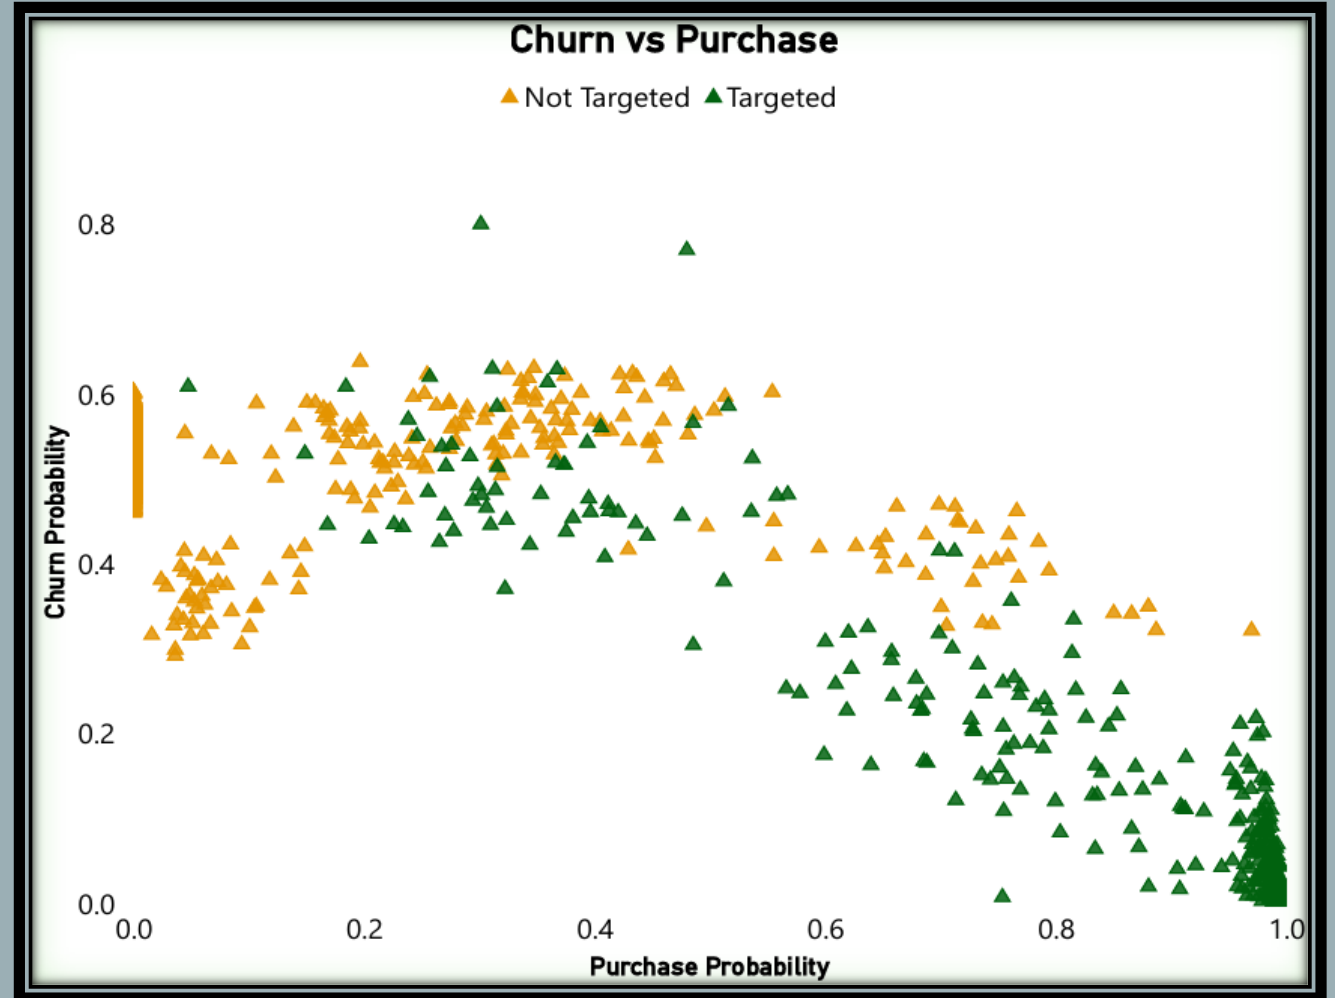

THE PROBLEM

- **Customer Value is Uneven**
 - A small group of customers contributes significantly more value
 - High-value customers show more consistent behavior
- **Engagement Drives Purchases**
 - Customers with higher interaction levels are more likely to buy
 - Low engagement is a strong indicator of inactivity
- **Inactivity Signals Churn Risk**
 - Customers with long inactivity periods are more likely to churn
 - Recent engagement reduces churn likelihood

CUSTOMER TARGETING STRATEGY

- **Key Idea:**
 - Customers were evaluated based on:
 - Likelihood to purchase
 - Risk of churn
- **Decision Logic:**
 - Prioritized customers with:
 - High purchase likelihood
 - Manageable churn risk

BUSINESS IMPACT

- **Key Outcome:**
 - Targeting a small subset of customers drives significant revenue
- **Efficiency Insight:**
 - Focused campaigns maximize returns with minimal cost

Total Customers	Targeted Customers	Revenue	Profit
8000	1000	₹16.66M	₹16.61M

A data-driven targeting strategy delivers high impact with low investment.

THANK YOU
